Professional summary

Data and AI analyst with 3+ years of experience in KPI and SLA reporting, requirements gathering, and operational analysis, and an M.S. in Information Systems from Saint Louis University (May 2026). Builds SQL and Power BI reporting and applied AI tools, including a retrieval-augmented (RAG) IT support assistant with its own evaluation harness for accuracy, hallucination, and refusal behavior. Led a 5-person team on a full-stack city parking modernization project (SQL Server, Node.js, React) that simulated 94.9% faster permit processing.

Technical skills

- **Data and BI:** SQL (SQL Server, MySQL), Power BI (DAX, Power Query), Microsoft Fabric, Looker Studio, advanced Excel, KPI reporting, exploratory data analysis
- **Programming:** Python (pandas, Matplotlib, Plotly), R, JavaScript (Node.js, React), REST APIs, Jest unit testing, Git/GitHub
- **AI and LLM applications:** retrieval-augmented generation (RAG), vector search (Chroma), prompt design, LLM output evaluation, FastAPI, Docker
- **Data modeling:** relational design (3NF), ERDs, stored procedures, views, triggers, query optimization, ETL concepts
- **Business analysis and delivery:** project management, requirements gathering, UAT and QA, gap analysis, BPMN, TOGAF, Agile/Scrum, Jira, Trello
- **AI tools:** Claude, Cursor

Professional experience

Data Analyst, Cognizant Technology Solutions, Hyderabad, India | Jan 2021 – May 2024

- Gathered reporting requirements from client stakeholders and technical teams and turned them into dashboards, reports, and operational metrics.

- Standardized 10+ KPIs with metric owners, reducing reporting-related stakeholder queries by 25%.
- Built and maintained Python and SQL pipelines using indexing, join optimization, and materialized views, achieving 99.9% data accuracy.
- Contributed to a delivery optimization model using Python, SQL, geolocation, and clustering, resulting in 30% shorter delivery time and 22% fewer last-mile failures.
- Produced about three recurring and ad hoc KPI and SLA reports per week for operational monitoring and management decisions.
- Ran issue validation and user acceptance testing in Jira to verify requirements before production deployments.

Projects

IT Support Assistant (RAG) | Python, FastAPI, Chroma, React, Docker

- Built a retrieval-augmented assistant that answers plain-language IT questions from a knowledge base, cites its source passages, and declines to answer when the documents do not cover the question; all 13 unit tests passed.
- Built an evaluation harness that measures retrieval hit rate, answer accuracy, hallucination rate, and refusal accuracy.
- Designed it to work with multiple LLM providers (Gemini, OpenAI, Anthropic) and local models.

City of Riverton Parking Modernization, Master's Research Project, team of 5 | SQL Server, Node.js/Express, React, Looker Studio, TOGAF

- Led the team as project manager, owning the charter, RACI matrix, and 11 milestone deliverables through the final report and presentation (100% on all graded deliverables).
- Defined 5 KPIs from a 6-table SQL Server dataset of 1,600+ records; found that 45.5% of citations were wrongful and that permit-status delays caused 58.8% of those.
- Co-designed a TOGAF-based architecture: SQL Server, a Node.js/Express REST API, a React citizen portal and officer app, and Stripe sandbox payments.
- In simulation, citation accuracy rose from 54.5% to 94.75%, permit processing fell from 168.24 to 8.61 hours (94.9%), and disputes dropped from 151 to 35, shown in a 3-tab Looker Studio dashboard.

Full-stack and software engineering coursework | Node.js, React, Jest, GitHub

- Built Node.js REST API and React labs covering SQL vs NoSQL design, secure sessions, and integration testing; wrote Jest unit tests for a Node.js app and designed a CI/CD pipeline for a JavaScript application.

Power BI dashboards, team project | Power BI, DAX, Power Query

- Co-built dashboards on U.S. employment data (1976–2022) and federal student loan trends (NSLDS, 2007–2025) with KPI cards, slicers, navigation buttons, and written conclusions tied to policy changes.

Additional academic projects

- **Sales and order database (SQL Server, Python):** normalized 3NF design with ERDs, stored procedures, views, and Python sales visualizations.
- **Statistical analysis (R):** Shapiro-Wilk tests, paired t-tests, and effect sizes on training outcomes for 150 employees.
- **Enterprise architecture (TOGAF ADM, ArchiMate):** redesigned an organization's architecture and built ROI-based business cases with risk assessments.

Education

M.S. Information Systems, Saint Louis University | May 2026

B.E. Electronics and Communication Engineering, Andhra University | 2020
